

UNATTENDED LONG-TERM ACOUSTIC MONITORING

Song Meter SM2™ Digital Field Recorder Platform

- Small, lightweight, and cost effective.
- Fully weatherproof enclosure and highly weather-resistant omnidirectional microphones.
- Low power consumption.
- Easily configured to record on almost any schedule to implement a wide range of sampling protocols.
- Programmable sampling rates, gain, filters and triggers allow customization.
- Expandable and flexible platform to meet your future needs:
 - Cabled hydrophone available for underwater recording.
 - Night Flight Call microphone available for monitoring migrating birds.
 - GPS option available for logging location and time synchronizing multiple recorders.
 - Built in temperature sensor and data logger.
- Unparalleled customer service!

Song Meter SM2BAT™ Ultrasonic Package

- Built on the low power and weatherproof Song Meter platform.
- 1/3 the cost of competitive solutions for unattended pre-construction surveys for wind farms.
- Listen to live bats using patent-pending Real Time Expansion™.
- Adaptive triggering and compression allows thousands of hours of recording on 4 SDHC cards.
- Continuous full spectrum 16-bit recording; stereo 192kHz or mono 384kHz models available.
- Second channel can simultaneously monitor birds, frogs and other wildlife.
- Free WAC2WAV utility allows scrubbing of noise files and conversion to zero crossing files.

Song Meter SM2M™ Marine Recorder

- Utilizes the proven and flexible Song Meter platform.
- Only 76cm long and 14kg in air fully loaded with 32 D sized batteries.
- Easily refurbished shipside for rapid redeployment.
- A fraction of the cost of similarly specified devices.
- Rated to 150m deployment depth, recoverable via tether, diver or acoustic release.
- Battery life up to 1,900 hours, continuously or spread out over several months.

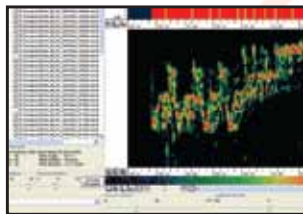

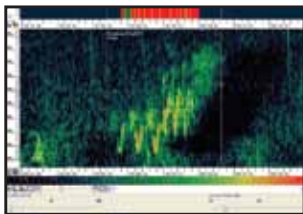

AUTOMATIC DETECTION OF BIRDS, FROGS AND BATS

Song Scope™ State-of-the-art Bioacoustics Software

Annotate vocalizations from recordings

Build a recognizer from annotations

Scan multiple recordings with recognizer to detect specific vocalizations

There are thousands of Song Meter recorders deployed in dozens of countries around the globe listening for diverse species of birds, frogs, bats, marine life and other wildlife populations, and monitoring the impact of human activity, habitat loss and climate change. With Song Meter you can survey more sites for a fraction of the cost of point-counts or other methods. Scan your recordings in Song Scope to automatically detect specific vocalizations for even more time and cost savings.
